MUST READ

What's *inside*

save this, come back to it

Nine short sections. Read it in one sitting, then keep it for the next 30 days.

01 **The truth about your first job** — What recruiters check first — p.03

02 **Six career pathways** — Roles, skills, tools, projects — p.05

03 **Your degree → your best-fit paths** — Where you start with an edge — p.12

04 **The skills gap** — College vs. what employers check — p.13

05 **AI in healthcare** — What changes, what doesn't — p.14

06 **Your 30-day action plan** — Plus a job-search tracker — p.16

07 **Five mistakes to avoid** — And what to do instead — p.18

08 **Job-readiness checklist** — Tick it before you apply — p.19

09 **Make an evidence-based decision** — Seven steps — p.20

01

The truth about your *first* job

Recruiters hire freshers for what they can show, not only for what they studied.

Most entry-level healthcare roles get many applications from people with the same degree. Your degree gets you into the pile. What moves you out of it is evidence that you understand the job and can start doing it.

WHAT STUDENTS FOCUS ON	WHAT RECRUITERS LOOK FOR
Marks and percentage	**Can you do the work on day one?**
College name	**Proof: a work sample or project**
Number of certificates	**Familiarity with the tools the role uses**
“I'm a quick learner”	**You understand what the role involves**
Applying everywhere	**Clear, professional communication**

The good news

Everything on the right can be learned and shown. The rest of this guide shows you how.

ARZON GLOBAL

A degree establishes your *academic foundation.*

Job readiness means you can *demonstrate* the skills a role needs.

— everything in this guide builds on this

02

Six paths into the *industry*

Each one hires freshers. Each one asks for different proof.

which one fits you?

PATH 01

Pharmacovigilance

Track and report side effects so medicines stay safe after approval.

PATH 02

Clinical Data Management

Make sure clinical trial data is complete, clean and ready for analysis.

PATH 03

Clinical Research

Help run clinical trials at hospitals and research sites.

PATH 04

Regulatory Affairs

Prepare the documents that get products approved and keep them compliant.

PATH 05

Medical Writing

Turn clinical and scientific data into clear documents.

PATH 06

Health Informatics

Use healthcare data and systems to improve care and decisions.

Pharmaco*vigilance*

01

Track and report side effects so medicines stay safe after approval.

WHAT THE JOB INVOLVES

Drug safety teams collect reports of adverse events from patients, doctors, literature and trials. They check each case, code it, write a short narrative and send it to regulators on time. Later roles look for patterns (signals) across many cases.

ROLES TO SEARCH FOR

- Drug Safety Associate
- PV Associate
- Case Processing Associate
- Safety Data Associate

SKILLS TO BUILD

- Case intake & triage
- MedDRA coding
- Writing case narratives
- Seriousness & causality basics
- Reporting timelines
- Attention to detail

TOOLS TO KNOW

Safety databases (e.g. Argus) · MedDRA & WHO-DD · Excel

PORTFOLIO PROJECT

Take three published case reports. Triage each one, code the events with MedDRA, and write a short case narrative for each.

HOW THE ROLE GROWS

Drug Safety Associate → Senior Associate → Quality Reviewer → Aggregate / Signal Specialist → PV Lead

REALITY CHECK The work is detailed and often volume-based. Early on, accuracy matters more than speed.

Clinical *Data* Management

02

Make sure clinical trial data is complete, clean and ready for analysis.

WHAT THE JOB INVOLVES

Data managers design how trial data is captured, set up checks that catch errors, raise queries with trial sites and clean the data until it can be locked and analysed.

ROLES TO SEARCH FOR

- Clinical Data Coordinator
- Clinical Data Associate
- Data Management Associate
- EDC Associate

SKILLS TO BUILD

- CRF design basics
- Edit checks
- Query management
- Data cleaning
- Medical coding basics
- GCP awareness

TOOLS TO KNOW

EDC systems (e.g. Medidata Rave) · CDISC: CDASH / SDTM basics · Excel

PORTFOLIO PROJECT

Design a mock CRF for a sample study and write ten edit checks, each with the query text a site would see.

HOW THE ROLE GROWS

Data Coordinator → Data Associate → Senior Associate → Data Manager → Lead Data Manager

REALITY CHECK Expect deadlines around database lock. Comfort with spreadsheets and rules helps a lot.

Clinical *Research*

03

Help run clinical trials at hospitals and research sites.

WHAT THE JOB INVOLVES

Site teams screen and enrol patients, manage consent, keep trial documents in order and work with sponsors and ethics committees. Monitors (CRAs) visit sites to check that the trial follows the protocol.

ROLES TO SEARCH FOR

- Clinical Research Coordinator
- Clinical Trial Assistant
- Site Coordinator
- CRA (after site experience)

SKILLS TO BUILD

- ICH-GCP
- Informed consent process
- Source documentation
- Ethics committee submissions
- Patient communication
- Organisation

TOOLS TO KNOW

CTMS · eTMF · EDC (awareness)

PORTFOLIO PROJECT

Pick a sample protocol. Build a site-file checklist and map the informed-consent process step by step.

HOW THE ROLE GROWS

CTA / CRC → Senior CRC → CRA → Senior CRA → Clinical Project Manager

REALITY CHECK Site roles can mean hospital hours and travel. Most CRA roles ask for site experience first.

Regulatory *Affairs*

04

Prepare the documents that get products approved and keep them compliant.

WHAT THE JOB INVOLVES

Regulatory teams compile and review dossiers, follow guidelines from bodies such as CDSCO, USFDA and EMA, manage changes to approved products and answer questions from regulators.

ROLES TO SEARCH FOR

- Regulatory Affairs Associate
- Regulatory Executive
- Regulatory Publishing Associate
- Labelling Associate

SKILLS TO BUILD

- CTD / eCTD structure
- Document review
- Clear writing
- Reading guidelines
- Change control
- Version control

TOOLS TO KNOW

eCTD publishing tools (awareness) · Word & Acrobat · Regulator websites

PORTFOLIO PROJECT

Take one approved medicine's public label and map its content to the CTD modules. Add a one-page summary of a CDSCO guideline.

HOW THE ROLE GROWS

RA Associate → RA Executive → Senior Executive → RA Manager

REALITY CHECK It is document-heavy and precise. Small errors matter, so careful reading is a core skill.

Medical *Writing*

05

Turn clinical and scientific data into clear documents.

WHAT THE JOB INVOLVES

Medical writers draft study documents, regulatory summaries, publications and educational content. They read research, check numbers against sources and write for a specific reader.

ROLES TO SEARCH FOR

- Associate Medical Writer
- Scientific Writer
- Regulatory Writer
- Medical Content Writer

SKILLS TO BUILD

- Reading research papers
- Summarising data
- Referencing
- Style guides (e.g. AMA)
- Basic statistics
- Plain-language writing

TOOLS TO KNOW

Word · PubMed · Zotero / EndNote

PORTFOLIO PROJECT

Pick a published trial. Write a one-page abstract and a plain-language summary a patient could follow.

HOW THE ROLE GROWS

Associate Writer → Medical Writer → Senior Writer → Lead / Manager

REALITY CHECK Most employers ask for a writing test. A strong sample often matters more than another certificate.

Health *Informatics*

06

Use healthcare data and systems to improve care and decisions.

WHAT THE JOB INVOLVES

Informatics and analytics teams work with hospital systems, health records and real-world data. They clean data, build reports and dashboards, and help clinical and business teams act on what the data shows.

ROLES TO SEARCH FOR

- Healthcare Data Analyst
- Health Informatics Associate
- Clinical Analyst
- Real-World Data Analyst

SKILLS TO BUILD

- Excel
- SQL basics
- Data visualisation
- ICD & HL7 / FHIR awareness
- Data privacy basics
- Asking good questions

TOOLS TO KNOW

Excel · SQL · Power BI / Tableau

PORTFOLIO PROJECT

Build a dashboard from a public health dataset and write three insights a hospital manager could act on.

HOW THE ROLE GROWS

Analyst → Senior Analyst → Informatics Specialist → Lead

REALITY CHECK You will spend a lot of time cleaning data. Comfort with numbers and tools matters as much as domain knowledge.

03

Your degree, your *head start*

find your row ↓

Where your degree gives you an edge. It is a starting point, not a limit.

IF YOU STUDIED	LOOK FIRST AT
B.Pharm	Pharmacovigilance · Regulatory Affairs · Clinical Data Management · Medical Writing
Pharm.D	Pharmacovigilance · Clinical Research · Medical Writing
M.Pharm	Regulatory Affairs · Medical Writing · Pharmacovigilance · Clinical Research
B.Sc / M.Sc Life Sciences, Biotech, Microbiology	Clinical Data Management · Clinical Research · Pharmacovigilance
Nursing & allied health	Clinical Research · Pharmacovigilance · Health Informatics
Any degree + data skills	Health Informatics · Clinical Data Management

Read this table the right way

Any of the six paths is open to you if you build the skills and show the proof. Your degree only decides how much ground you have already covered.

04

Mind the *skills gap*

College gives you the science. Employers check whether you can use it at work.

COLLEGE TAUGHT YOU	EMPLOYERS CHECK FOR
Pharmacology theory	Applying it to a real case: causality, narratives, decisions
Exam answers	Professional documents: summaries, narratives, clear emails
Lab practicals	Industry tools: EDC, safety databases, Excel, dashboards
Knowing guidelines exist	Reading and applying ICH-GCP, CDSCO and FDA guidance
Marks and grades	Evidence: work samples and a short portfolio
Group projects	Workplace habits: queries, follow-ups, deadlines

How to close it

Pick one path. Learn its core tool. Build one project that shows the right-hand column. That is enough to start applying with confidence.

05

AI is changing the *work*, not the need for experts

Five places you will already see AI in healthcare jobs.

1 **Case intake in drug safety**
AI can pull key details from incoming reports. People still assess and decide.

2 **Coding suggestions**
Tools can suggest MedDRA or ICD codes. A trained reviewer confirms them.

3 **Literature screening**
AI helps scan large volumes of papers for safety or writing work.

4 **Data cleaning**
In data management, AI can flag unusual values for a person to query.

5 **First drafts**
AI can draft summaries and documents. Experts check every fact.

What AI means for *you*

New ways of working bring both openings and risks. Know both.

OPPORTUNITIES

- Less time on repetitive steps
- More time for judgement and review
- New roles that mix domain and tech skills
- Faster learning with AI as a study aid

CHALLENGES

- AI can be confidently wrong
- Patient data privacy
- Tools must be validated before use
- Over-reliance weakens your basics

STUDENT TAKEAWAY

AI drafts. *You* check.

Learn the domain first, so you can spot when AI is wrong. Then use AI to work faster. Employers value people who can do both.

that's the real edge

06

Your next *30 days*

One clear goal per week. Small steps, done every day.

start today, not on Monday

Week 1 Days 1–7

Choose

- Take a career assessment
- Read ten job descriptions for each
- Shortlist two pathways
- List the skills that repeat

Week 2 Days 8–14

Learn

- Learn the core concepts of one path
- Build a glossary of key terms
- Get hands-on with one tool
- Follow people who do the job

Tip: block 60–90 minutes a day. Consistency beats long weekend sessions.

Week 3 Days 15–21

Build

- Do one portfolio project
- Write it up as a one-page case study
- Tailor your resume to the role
- Ask someone to review it

Week 4 Days 22–30

Apply

- Update your LinkedIn profile
- Send targeted applications
- Log every application in a tracker
- Practise explaining your project

Your job-search *tracker*

Copy this into a sheet. Update it every time you apply.

COMPANY	ROLE	APPLIED	SOURCE	CONTACT	STATUS	FOLLOW-UP

follow up after a week ✦

07

Five mistakes that *slow* freshers down

been there? fix it ↓

1

Applying to everything

Without a target role, your resume fits nothing well. **Instead:** pick one path and one role title.

2

Collecting certificates, not evidence

Certificates show you attended. **Instead:** build one project that shows you can do the work.

3

One resume for every job

Recruiters notice generic resumes. **Instead:** match the words in each job description.

4

Skipping the job description

It tells you exactly what they check. **Instead:** read ten before you apply to one.

5

Waiting until final year

Late starts mean rushed choices. **Instead:** start the 30-day plan now.

ARZON GLOBAL

08

Are you *job-ready?*

Tick each line honestly. Every gap is your next task.

- [ ] I can name my target role
- [ ] I have read ten or more job descriptions for it
- [ ] I know the core concepts and key terms
- [ ] I have used at least one industry tool
- [ ] I have one portfolio project to show
- [ ] My resume is tailored to the role
- [ ] My LinkedIn profile is up to date
- [ ] I can explain my project in two minutes
- [ ] I am tracking every application

screenshot this

09

Decide with *evidence*

Seven steps to choose a path you will stick with.

1. **Assess yourself**
   Your strengths, interests and the kind of work you enjoy.
2. **Research real roles**
   Read job descriptions, not only course brochures.
3. **Talk to people in the role**
   Ask what a normal day looks like.
4. **Check your skills gap**
   Compare what you have with what the role asks for.
5. **Test with a small project**
   Try the work before you commit to it.
6. **Compare training on evidence**
   Look at the curriculum, tools, real work samples and honest outcomes.
7. **Decide and commit**
   Give your chosen path 90 focused days.

Learn the science. Practise the workflow. *Demonstrate* your skills. Apply with purpose.
